NEW PSAT 3 PRACTICE TESTS

Thank you for purchasing Ivy Global's *New PSAT 3 Practice Tests*! We hope that you enjoy the use of this excellent practice resource as you prepare to take the PSAT. While making use of this exam, please note the following corrections to Edition 1.0. We wish you happy studies, and the best of luck in achieving all of your scholastic goals!

- On p. 84, question 10 should read:

   It can reasonably be inferred from the graphic that

   A) Houston has more recent college graduates than any other major American city.
   B) New York and St. Louis have roughly the same percentage of college graduates relative to the rest of their populations.
   C) the population of college graduates aged 25-34 of Cleveland and Atlanta are aging relatively slowly compared to the same demographic in other major metropolitan areas.
   D) Minneapolis, Chicago, and Boston saw population growth of college graduates aged 25-34, but at slower rates than the national average.

- On p. 89, question 25 should read:

   Why does Dr. Hood bring up his previous work on the poison attempt on the French President?

   A) To prove his qualifications for the case
   B) To contrast Mr. Brown's request with the significance of his usual cases
   C) To show his work expands beyond the literary and educational
   D) To suggest that they are all in danger

- On p. 120, for question 4: To avoid any confusion, please consider answer choice A) as $a \leq 3b$. Since a is 4, and b is 1, a cannot be < or = $3b$. This clarifies the logic of the problem, leaving answer choice B) as the only possible answer.

We understand you may have some questions about recent changes by the College Board.
